Survey questionnaires (Part 1)

How old are you?
28

How many years of experience do you have with Java programming?
2

For how many years have you been programming for larger software projects e.g. in a company? Please enter a number between 0 and 30.
1

How many years of experience do you have with code refactoring?
2

Did you study programming or computer science at a university?
Yes

During your education, how many courses did you take where Java was the primary language?
3

On a scale from 1 to 5, how would you rate your Java programming expertise (e.g 1-very inexperienced, 5-very experienced)?
3

How would you compare your Java expertise to those with over 20 years of practical experience (e.g 1-very inexperienced, 5-very experienced)?
2

How would you rate your Java expertise in comparison to your peers or colleagues (e.g 1-very inexperienced, 5-very experienced)?
3

How often have you used Chat GPT (e.g 1-low, 5-high)?
3

Have you used ChatGPT for code refactoring tasks (e.g 1-low, 5-high)?
3

What is the average size of Java professional projects you typically work on, categorized as small-scale (up to 900 lines of code), medium-scale (900 to 40,000 lines of code), or large-scale (exceeding 40,000 lines of code)?
medium scale

Group time: Survey questionnaires (Part 1)

Task Explanation

Tasks Overview: In each of the two sections, you will encounter five Java code snippets that require refactoring. The first five snippets must be refactored without assistance from ChatGPT, while the last five snippets can be refactored with the aid of ChatGPT. Primarily, you have two alternatives: Without Assistance: Refactor the code on your own, relying on your existing knowledge and skills. With ChatGPT Assistance: Utilize the assistance of ChatGPT to receive suggestions and guidance for refactoring the code. Timing: Each assignment must be completed within a strict time constraint of 3 minutes. You must complete the work within a 3-minute timeframe, otherwise, timeouts will occur. Efficiently allocate your time to ensure timely completion of all jobs. Instructions: Read the code: Begin by thoroughly understanding the provided Java code snippet. Refactor: Apply your refactoring skills to improve the code based on the given criteria (readability, efficiency, maintainability, etc.).

Question 1 for Pretest (Part 2)

Refactor the below code snippet without ChatGPT within 3 minutes. public double getPayAmount() { double result; if (isDead) { result = deadAmount(); } else { if (isSeparated) { result = separatedAmount(); } else { if (isRetired) { result = retiredAmount(); } else { result = normalPayAmount(); } } } return result;}

Group time: Question 1 for Pretest (Part 2)
130.69

Question 2

Refactor the below code snippet without ChatGPT within 3 minutes. public class Customer { private String name; private String address; private double balance; public Customer(String name, String address) { this.name = name; this.address = address; this.balance = 0; } public void deposit(double amount) { this.balance += amount; } public void withdraw(double amount) { this.balance -= amount; } public double getBalance() { return balance; } }

Group time: Question 2
3.92

Question 3

Refactor the below code snippet without ChatGPT within 3 minutes. public class Customer { private String name; private String address; private double balance; public Customer(String name, String address, double initialBalance) { this.name = name; this.address = address; this.balance = initialBalance; } public void processPayment(double amount) { if (amount > balance) { throw new InsufficientFundsException(); } balance -= amount; } public void printStatement() { System.out.println("Customer name: " + name); System.out.println("Customer address: " + address); System.out.println("Customer balance: " + balance); }}

Interview Question (Part 4)

Can you share your experiences using ChatGPT for code refactoring? What were the specific benefits or advantages you observed during the process?

In what ways did ChatGPT enhance your productivity and efficiency in completing code refactoring tasks? Please provide specific examples.

Did ChatGPT help you discover new refactoring techniques or approaches that you were previously unaware of? If yes, please elaborate on these insights.

How did ChatGPT contribute to the maintainability and readability of the code you produced during refactoring? Were there any notable improvements or challenges in this aspect?

Were there any specific challenges or limitations you encountered while using ChatGPT for code refactoring? How did you overcome them, if at all?

In what scenarios do you believe AI assistance, like ChatGPT, is most beneficial for code refactoring? Conversely, are there situations where you think it might be less effective or not suitable at all?

How does ChatGPT's performance vary depending on the complexity of the code?

Would you recommend ChatGPT to other Java programmers?
